## Professional Summary

Results-driven Enterprise Sales Engineer with 8+ years of progressive experience in technical sales, DevOps engineering, and observability solutions. Proven expertise in articulating complex technical value propositions to enterprise customers, conducting product demonstrations, and closing high-value deals through deep technical knowledge. Skilled in programming and scripting with Python, Java, Go, Node.js, Ruby, and PHP. Demonstrated success partnering with sales teams to qualify opportunities, manage proof-of-concept evaluations, and provide strategic product feedback based on customer requirements and competitive landscape analysis. Strong communicator with ability to translate technical concepts into business value for C-level executives and technical stakeholders. Experienced in AI-driven observability platforms, infrastructure monitoring, and DevOps best practices. Committed to building lasting customer relationships and driving product innovation through customer-centric feedback.

## Skills

**Core Skills:** Enterprise Sales Engineering, Technical Sales, Sales Presentations, Product Demonstrations, Proof of Concept Management, Customer Technical Engagement, Competitive Analysis, Value Proposition Development, CRM Management, Customer Feedback Analysis, Technical Briefings, Stakeholder Communication, Oral Communication, Written Communication, Deal Closing, Customer Qualification, Python, Java, Go, Node.js, Ruby, PHP, .NET, C++, JavaScript, SQL, DevOps Engineering, Observability, Infrastructure Monitoring, Application Performance Monitoring, Log Management, Metrics Collection, Distributed Tracing, Alert Management, Incident Response, Cloud Infrastructure, Containerization, Kubernetes, Docker, CI/CD Pipelines, Artificial Intelligence, Machine Learning, AI-driven Observability, Anomaly Detection, Predictive Analytics, Data Analysis, Statistical Analysis, Algorithms, Datadog, AWS, Google Cloud Platform, Azure, Salesforce, HubSpot, Git, Jenkins, Prometheus, Grafana, ELK Stack, Splunk

## Professional Experience

**Datadog | San Francisco, CA** Mar 2023 - Present

*Senior Enterprise Sales Engineer*

**Technologies:** Python, Java, Go, Node.js, Ruby, PHP, Datadog, AWS, Kubernetes, Docker

- Led technical engagement with 40+ enterprise customers during trial phases, articulating Datadog's observability value proposition and AI-driven capabilities, resulting in 85% POC-to-close conversion rate and 28 million in annual contract value. Delivered advanced competitive briefings and product demonstrations to C-level executives and technical teams, leveraging deep knowledge of observability risks and infrastructure monitoring to position Datadog against competitors, directly influencing 15 complex deal closures worth 12 million. Maintained comprehensive CRM documentation of customer feedback, competitive intelligence, and technical requirements, providing actionable insights to product management that influenced roadmap prioritization for three major observability features. Collaborated with sales team to develop and execute customized evaluation plans for customers, addressing technical concerns around log management, distributed tracing, and AI-powered anomaly detection while ensuring successful trial conclusions.
- Demonstrated expert-level proficiency in customer programming environments including Python, Java, Go, Node.js, Ruby, and PHP, enabling credible technical discussions and custom integration guidance that accelerated customer adoption and reduced implementation timelines by 30%. Proactively engaged with DevOps engineering teams at customer sites to understand infrastructure complexity, application performance monitoring requirements, and

incident response workflows, translating technical needs into Datadog solution architecture recommendations. Conducted 50+ technical presentations on observability best practices, AI-driven insights, and metrics-driven decision making to diverse technical audiences, establishing thought leadership and building customer confidence in Datadog's platform capabilities.

## **New Relic | San Francisco, CA Jun 2021 - Feb 2023**

### *Enterprise Sales Engineer*

**Technologies:** Python, Java, Node.js, Ruby, Go, AWS, Kubernetes, Docker, Prometheus

- Partnered with enterprise sales team to qualify and close 35 high-value opportunities in observability and application performance monitoring, generating 8.5 million in annual recurring revenue through technical credibility and deep product knowledge. Owned technical evaluation phase for complex deals, managing proof-of-concept timelines, coordinating customer technical teams, and addressing infrastructure monitoring concerns to drive successful outcomes and customer satisfaction. Delivered 60+ technical presentations and product demonstrations to Fortune 500 companies, effectively communicating New Relic's value proposition around AI-powered anomaly detection, distributed tracing, and real-time observability across cloud infrastructure. Maintained detailed customer feedback in CRM systems, identifying competitive threats and market trends that informed product strategy discussions with engineering leadership.
- Demonstrated advanced programming knowledge across Python, Java, Node.js, Ruby, and Go, enabling credible technical conversations with customer DevOps teams and architects regarding integration patterns, API usage, and custom instrumentation requirements. Proactively engaged with customers on technical issues and concerns during trials, troubleshooting observability challenges and providing guidance on best practices for metrics collection, log aggregation, and incident response workflows. Collaborated with customer success teams to ensure smooth transitions from sales engineering to implementation, maintaining relationships and gathering feedback on product capabilities and competitive positioning.

## **HashiCorp | San Francisco, CA Jan 2019 - May 2021**

### *Sales Engineer*

**Technologies:** Go, Python, Java, Node.js, AWS, Azure, Google Cloud Platform, Kubernetes, Docker

- Supported sales team in qualifying and closing 28 enterprise infrastructure automation deals, providing technical expertise in infrastructure-as-code, DevOps practices, and cloud platform integration, resulting in 6.2 million in annual contract value. Conducted 45+ technical briefings and product demonstrations to enterprise customers, articulating HashiCorp's value proposition around infrastructure automation, multi-cloud management, and DevOps transformation, directly influencing deal progression and customer confidence. Managed proof-of-concept evaluations for complex infrastructure scenarios, working closely with customer DevOps teams to design evaluation plans, address technical concerns, and ensure successful trial conclusions that validated business value. Gathered and documented customer feedback regarding product capabilities, competitive landscape, and infrastructure challenges, providing strategic insights to product management that influenced feature prioritization.
- Leveraged programming expertise in Go, Python, Java, and Node.js to provide credible technical guidance on infrastructure automation, API integration, and custom tooling development, enabling customers to envision advanced use cases and accelerate adoption timelines. Proactively engaged with customer technical teams to understand DevOps workflows, infrastructure complexity, and automation pain points, translating requirements into HashiCorp solution recommendations that addressed business objectives. Maintained accurate CRM records of customer interactions, technical requirements, and competitive intelligence, supporting sales pipeline management and enabling informed strategic discussions with leadership.

## **Atlassian | San Francisco, CA Aug 2017 - Dec 2018**

### *DevOps Sales Engineer*

**Technologies:** Python, Java, Node.js, Ruby, PHP, AWS, Docker, Jenkins, Git

- Partnered with enterprise sales team to qualify and close 22 DevOps and CI/CD platform deals, providing technical expertise in continuous integration, deployment automation, and development workflow optimization, generating 4.8 million in annual contract value. Delivered 40+ technical presentations and product demonstrations to development and DevOps teams at enterprise customers, effectively communicating Atlassian's value proposition around

collaboration, automation, and software delivery excellence. Managed technical evaluations and proof-of-concept projects, coordinating with customer technical teams to design evaluation plans, address integration concerns, and ensure successful trial conclusions that validated business impact. Maintained comprehensive customer feedback documentation in CRM systems, identifying market trends and competitive threats that informed product strategy and sales enablement initiatives.

- Demonstrated proficiency in programming languages including Python, Java, Node.js, Ruby, and PHP, enabling credible technical discussions with customer development teams regarding CI/CD pipeline design, automation best practices, and integration patterns. Proactively engaged with customers on technical issues and concerns during trials, providing guidance on DevOps workflows, deployment strategies, and infrastructure automation to accelerate adoption and customer success. Collaborated with customer success and support teams to ensure smooth transitions from sales engineering to implementation, maintaining relationships and gathering feedback on product capabilities and customer satisfaction.

## **Pivotal Software | San Francisco, CA Mar 2016 - Jul 2017**

### *Solutions Engineer*

**Technologies:** Java, Python, Go, Node.js, Cloud Foundry, Kubernetes, Docker, AWS

- Supported sales team in qualifying and closing 18 cloud platform and application development deals, providing technical expertise in cloud-native architecture, containerization, and DevOps practices, resulting in 3.5 million in annual contract value. Conducted 35+ technical briefings and product demonstrations to enterprise customers, articulating Pivotal's value proposition around cloud platforms, microservices architecture, and application modernization, directly influencing deal progression and customer decision-making. Managed proof-of-concept evaluations for cloud platform adoption, working with customer technical teams to design evaluation plans, address architectural concerns, and ensure successful trial conclusions that validated business value and technical feasibility. Gathered and documented customer feedback regarding platform capabilities, competitive positioning, and cloud infrastructure requirements, providing insights to product management.
- Leveraged programming expertise in Java, Python, Go, and Node.js to provide credible technical guidance on cloud-native application development, containerization strategies, and microservices architecture, enabling customers to envision modernization pathways. Proactively engaged with customer development and operations teams to understand application architecture, deployment challenges, and cloud adoption objectives, translating requirements into Pivotal solution recommendations. Maintained accurate CRM documentation of customer interactions, technical requirements, and competitive intelligence, supporting sales pipeline management and strategic business discussions.
