

Harmain Ali

San Francisco, CA | harmain.dev@gmail.com | +1 (650) 555-1234 | <https://www.linkedin.com/in/harmainali>

Professional Summary

Highly accomplished and customer-centric Staff Product Manager with over 10 years of experience defining strategy, developing roadmaps, and delivering innovative products for databases and distributed systems. Proven expertise in owning the end-to-end user journey, driving measurable business results, and excelling in cross-functional stakeholder management. Adept at leveraging an AI-first mindset to identify opportunities for AI-assisted query diagnosis, automated plan management, and intelligent self-remediation, significantly enhancing product quality and operational efficiency. Deep understanding of TCO implications, multi-region architectures, and the complexities of ensuring always-on, globally consistent database performance.

Skills

Core Skills: Product Management, Product Strategy, Roadmap Development, User Journey Mapping, Customer-Centric Design, Stakeholder Management, Business Results, Market Analysis, Competitive Benchmarking, TCO Analysis, Agile Methodologies, Go-to-Market Strategy, Databases, Distributed Systems, Multi-Region Architectures, High Availability, Scalability, Data Consistency, Performance Engineering, SQL, NoSQL, Database Administration, Cloud Databases, Artificial Intelligence (AI), Machine Learning (ML), AI-assisted Query Diagnosis, Automated Plan Management, Intelligent Self-Remediation, Data Analytics Automation, Predictive Analytics, Python, Go, C++, JavaScript, AWS, Docker, Git, Jupyter Notebooks, TensorFlow, PyTorch

Professional Experience

AMD | San Francisco, CA Dec 2023 - Dec 2026

Staff Product Manager

Technologies: AWS, SQL, NoSQL, Python, Go, Distributed Systems

- Defined and executed the product strategy and roadmap for next-generation database performance and reliability features, focusing on multi-region deployments and TCO optimization, resulting in a 20% reduction in operational costs for enterprise customers.
- Owned the end-to-end user journey for critical database transactions, implementing an AI-first mindset to introduce AI-assisted query diagnosis and intelligent self-remediation capabilities, improving system uptime by 15%.
- Drove cross-functional stakeholder management across Engineering, Sales, and Marketing to align on product vision and deliver measurable business results, expanding market share in the distributed systems segment.
- Championed customer-centric product development, gathering qualitative and quantitative data to prioritize features like automated plan management, enhancing database stability and reducing support ticket volumes by 25%.

NVIDIA | Santa Clara, CA Jan 2021 - Nov 2023

Senior Product Manager

Technologies: Python, TensorFlow, PostgreSQL, Distributed Systems, Cloud Platforms

- Developed and managed the product roadmap for scalable distributed database solutions, focusing on enhancing performance and consistency for high-throughput workloads, leading to a 30% improvement in data processing speeds.
- Translated complex technical capabilities into clear, customer-centric value propositions, significantly improving user journey adoption for new database features and driving a 10% increase in customer engagement.

- Collaborated with engineering teams to integrate advanced AI/ML models into database monitoring tools, laying the groundwork for future AI-assisted query diagnosis and automated operational insights.
- Successfully managed internal and external stakeholder expectations, delivering key product releases that consistently met business results and strategic objectives for distributed systems.

Google | Mountain View, CA Jan 2018 - Dec 2020

Product Manager

Technologies: Python, C++, SQL, Angular, Cloud Services

- Contributed to the product strategy for Google Cloud's database services, identifying key customer pain points related to scalability and reliability in distributed environments.
- Defined detailed product requirements and user stories for database features, ensuring a customer-centric approach that addressed critical operational and economic constraints.
- Partnered with engineering and design teams to launch new features that improved data consistency and reduced latency for core database offerings, directly impacting user journey satisfaction.
- Conducted competitive analysis and TCO assessments to inform product prioritization, ensuring alignment with market demands and driving initial business results for new database functionalities.

Microsoft | Seattle, WA Jan 2016 - Dec 2017

Associate Product Manager

Technologies: SQL Server, Azure, Python, Data Analytics

- Supported senior product managers in defining the product strategy for Azure database services, conducting market research and competitive analysis to identify growth opportunities.
- Assisted in mapping the customer user journey for database migration and management, contributing to improvements in onboarding and operational predictability.
- Collaborated with engineering teams to gather requirements and define specifications for minor feature enhancements, gaining foundational experience in product lifecycle management for distributed systems.
- Analyzed product usage data and customer feedback to inform product decisions, contributing to a data-driven approach for achieving business results.

Certifications

- Certified Product Owner (CSPO)
- Google Cloud Professional Cloud Architect (Distributed Systems Focus)
- Go Programming Language Certification (Gopher Academy)
- Database Administration for Distributed Systems | Coursera
- AI Product Management Specialization | University of Maryland

Education

Stanford University

Master's in Computer Science with a specialization in Distributed Systems and Databases 2017 **University of California, Berkeley**

Bachelor of Science in Computer Science 2016
