Professional Summary

Highly accomplished and customer-centric Staff Product Manager with 9+ years of experience leading the strategy, product direction, and roadmap for complex data platforms and developer tooling. Proven expertise in optimizing Data Onboarding and Database Migrations, leveraging advanced AI, including LLMs, for schema conversion, data type mapping, and error remediation. Adept at driving measurable outcomes, fostering influential communication, and collaborating with cross-functional teams, including DBAs and Architects, to deliver innovative, self-service solutions for enterprise clients. Passionate about transforming challenging technical workflows into predictable, low-friction user journeys.

Skills

Core Skills:	Product Strategy, Product Direction, Roadmap Development, Customer-centric Design, User Journey Mapping, Market Research, Competitive Analysis, Agile Methodologies, Stakeholder Management, Influential Communication, Cross-functional Alignment, Go-to-Market Strategy, Metrics & Analytics, Data Onboarding, Database Migrations, Schema Conversion, ETL/ELT Pipelines, PostgreSQL, Oracle, MySQL, SQL Server, SQL, NoSQL, Database Architecture, Data Engineering, DBAs, Architects, Large Language Models (LLMs), Generative AI, AI-native Tooling, Machine Learning (ML), Artificial Intelligence (AI), Data Science, Model Deployment, Python, TensorFlow, PyTorch, AWS, Docker, Git, Jira, Confluence, RESTful APIs
---------------------	--

Professional Experience

AMD | Santa Clara, CA Jan 2024 - Present

Staff Product Manager, Data Platform

Technologies: Python, AWS, PostgreSQL, Oracle, LLMs, Generative AI

- As a Staff Product Manager, defined the product direction and comprehensive roadmap for AMD's internal data platform, focusing on critical Data Onboarding and Database Migrations for large-scale analytical systems, resulting in a 20% reduction in migration time.
- Spearheaded initiatives to integrate Large Language Models (LLMs) into schema conversion tooling, significantly reducing manual effort and improving accuracy for migrations from diverse source databases like Oracle and PostgreSQL.
- Led a customer-centric approach, collaborating with internal DBAs and Architects to identify pain points in data ingestion and migration workflows, translating insights into actionable product features that enhanced user journeys and platform reliability.
- Facilitated influential communication across engineering, sales, and executive teams, aligning stakeholders on the strategic value of improved data onboarding capabilities and their impact on overall data platform adoption and efficiency.

NVIDIA | Santa Clara, CA Jan 2021 - Dec 2023

Senior Product Manager, Developer Tools

Technologies: Python, MySQL, SQL Server, AWS, Docker, Machine Learning

- Managed the end-to-end product lifecycle for NVIDIA's developer tooling suite, with a focus on data integration and Database Migrations, achieving a 15% improvement in developer productivity for data-intensive applications.

- Drove the product direction for schema conversion utilities, enabling seamless transitions from various database types including MySQL and SQL Server, directly addressing critical needs of Architects and developers.
- Implemented a data-driven strategy to enhance Data Onboarding processes, utilizing quantitative metrics and qualitative customer feedback to prioritize roadmap features that streamlined data ingestion and reduced setup friction.
- Cultivated influential communication channels with cross-functional teams, including engineering and marketing, to ensure successful product launches and widespread adoption of new migration features, shortening time-to-value for customers.

Google | Mountain View, CA Jan 2017 - Dec 2020

Product Manager, Cloud Data Services

Technologies: Python, PostgreSQL, SQL, Cloud Computing, Data Engineering

- Defined the product direction and managed the roadmap for key Google Cloud data services, focusing on improving the Data Onboarding experience for enterprise clients, leading to a 10% increase in service adoption.
- Collaborated with DBAs and data Architects to gather requirements and design features for robust Database Migrations, ensuring compatibility and data integrity across diverse customer environments.
- Championed a customer-centric approach to develop self-service tools for schema conversion and data ingestion, significantly reducing reliance on professional services and accelerating time-to-production for new users.
- Utilized influential communication to articulate product vision and strategy to engineering teams and senior leadership, securing resources and alignment for initiatives that enhanced the overall user journey for data management on Google Cloud.

Certifications

- Certified Product Manager (CPM) | AIPMM
- AWS Certified Database Specialty | Amazon Web Services
- Oracle Certified Professional, Database Administrator | Oracle
- Generative AI for Developers | Google Cloud

Education

Stanford University

Master's in Computer Science with a Specialization in Data Systems 2017 **University of California, Berkeley**
Bachelor of Science in Computer Science 2016
