

Sabih Haider

San Francisco, CA | sabih0364@gmail.com | +923410084746 | <https://linkedin.com/in/sabih-haider>

Professional Summary

Full-stack software engineer with 8+ years of hands-on experience designing and building distributed systems, AI-powered infrastructure, and scalable cloud platforms. Proven expertise in building agentic systems, data pipelines, and observability solutions across AWS, GCP, and Azure. Skilled in React, HTMX, and modern infrastructure-as-code practices using Terraform and Ansible. Strong track record of architecting complex systems that combine classical software engineering with emerging AI technologies, delivering measurable business impact through intelligent automation and seamless human-AI collaboration.

Skills

Core Skills: React, HTMX, JavaScript, TypeScript, CSS, REST APIs, GraphQL, Python, Node.js, Go, Microservices, Distributed Systems, Message Queues, gRPC, AWS, GCP, Azure, Terraform, Ansible, Infrastructure as Code, Docker, Kubernetes, AI, Agentic Systems, ETL, Data Pipelines, Vector Databases, Feature Stores, LLMs, PostgreSQL, MongoDB, CI/CD, Observability, Monitoring, Logging, Prometheus, Grafana, Jenkins, GitHub Actions, Alerting, SQL, PostgreSQL, CockroachDB, Distributed Databases, Schema Design, Query Optimization

Professional Experience

Google | Mountain View, CA Jan 2023 - Present

Senior Software Engineer, Infrastructure & AI Systems

Technologies: Python, Go, React, HTMX, GCP, Terraform, Kubernetes, PostgreSQL, Vector Databases, Prometheus, Grafana

- Architected and deployed an agentic workflow system that integrates AI agents with classical software engineering patterns, enabling autonomous task execution across distributed infrastructure while maintaining human oversight and control, resulting in 40% reduction in manual operational overhead.
- Designed and implemented comprehensive observability infrastructure using Prometheus and Grafana to monitor continuously running workflow processing systems, providing real-time alerting and actionable insights that reduced mean time to resolution by 35% for production incidents.
- Built data pipeline infrastructure for AI systems including ETL processes for LLM training, vector database integration for semantic search, and feature store implementation, enabling rapid experimentation with AI-powered features across the organization.
- Led full-stack development of next-generation workflow UI using React and HTMX, creating seamless human-AI collaboration interfaces that improved user adoption by 60% and established new patterns for agent-assisted user experiences.

Microsoft | Seattle, WA Jun 2021 - Dec 2022

Software Engineer, Cloud Infrastructure & Observability

Technologies: Python, TypeScript, React, Azure, Terraform, Ansible, Docker, Kubernetes, PostgreSQL, CI/CD, Jenkins

- Developed infrastructure-as-code solutions using Terraform and Ansible to manage multi-cloud deployments across Azure and AWS, reducing infrastructure provisioning time from weeks to hours and enabling consistent environment replication across 50+ teams.

- Implemented distributed systems monitoring and alerting framework that tracked performance metrics across 200+ microservices, improving observability coverage from 45% to 98% and enabling proactive issue detection before customer impact.
- Designed and built CI/CD pipeline orchestration system using Jenkins and GitHub Actions, supporting 500+ daily deployments with automated testing, security scanning, and progressive rollout capabilities that reduced deployment failures by 70%.
- Collaborated with product teams to design intuitive monitoring dashboards and alerting workflows, translating complex distributed system telemetry into actionable insights for both technical and non-technical stakeholders.

Amazon Web Services | Seattle, WA Mar 2019 - May 2021

Software Engineer, Distributed Systems

Technologies: Python, Go, Node.js, React, AWS, PostgreSQL, MongoDB, Kubernetes, Docker, Terraform

- Engineered distributed database optimization layer that improved query performance by 45% for high-throughput workloads, implementing advanced indexing strategies and query planning optimizations across PostgreSQL and MongoDB clusters serving millions of requests daily.
- Built full-stack monitoring and diagnostics platform using React frontend and Python backend, providing AWS customers with deep visibility into distributed system behavior, query execution patterns, and resource utilization across multi-region deployments.
- Developed infrastructure-as-code modules using Terraform to automate deployment of complex distributed systems, reducing manual configuration errors by 80% and enabling self-service infrastructure provisioning for 30+ internal teams.
- Mentored 5 junior engineers on distributed systems design principles, code review practices, and production troubleshooting, establishing technical standards that improved code quality metrics across the team by 35%.

Uber | San Francisco, CA Aug 2017 - Feb 2019

Software Engineer, Data Infrastructure

Technologies: Python, JavaScript, React, AWS, PostgreSQL, MongoDB, Kafka, Spark, Docker, Jenkins

- Designed and implemented large-scale ETL data pipeline infrastructure processing 10+ terabytes daily, enabling real-time analytics and machine learning feature generation for recommendation systems serving millions of users.
- Developed React-based data exploration and visualization platform enabling data scientists and analysts to query, transform, and visualize complex datasets without writing code, increasing data accessibility across 200+ users.
- Built comprehensive monitoring and alerting system for data pipeline health, implementing automated recovery mechanisms that reduced data pipeline failures from 15% to less than 1% and improved data freshness SLAs.
- Established CI/CD best practices using Jenkins and Docker, implementing automated testing and deployment workflows that reduced time-to-production for data infrastructure changes from days to hours.

Stripe | San Francisco, CA Jan 2016 - Jul 2017

Software Engineer, Full-Stack

Technologies: Python, JavaScript, React, Node.js, PostgreSQL, AWS, Docker, Git

- Developed full-stack features for Stripe's dashboard using React frontend and Python backend, handling complex financial data visualization and transaction management for thousands of merchants processing billions in payments.
- Optimized PostgreSQL queries and database schema design for high-concurrency payment processing systems, improving transaction throughput by 30% and reducing latency for critical payment operations.
- Implemented comprehensive error tracking and monitoring system that captured production issues in real-time, enabling rapid diagnosis and resolution of customer-impacting bugs within minutes rather than hours.
- Collaborated cross-functionally with product, design, and operations teams to deliver user-centric solutions, conducting user research and iterating on features based on merchant feedback and usage analytics.

Certifications

- AWS Certified Solutions Architect - Professional
- AWS Certified DevOps Engineer - Professional
- Google Cloud Professional Cloud Architect
- Microsoft Azure Solutions Architect Expert
- Certified Kubernetes Administrator
- HashiCorp Certified: Terraform Associate
- Linux Foundation Certified Associate

Education

University of California, Berkeley

Master of Science in Computer Science 2015 **University of California, Berkeley**

Bachelor of Science in Computer Science 2013
