

Sabih Haider

Seattle, WA | sabih.haider@gmail.com | +1-425-555-0147 | <https://linkedin.com/in/sabih-haider>

Professional Summary

Full-stack software engineer with 8+ years of hands-on experience designing and building distributed systems, agentic AI infrastructure, and scalable cloud-native applications. Proven expertise in building observability and monitoring systems for complex workflows, implementing data pipelines and ETL processes for AI systems, and developing intuitive user interfaces that seamlessly integrate human-AI collaboration. Strong background in infrastructure as code, CI/CD automation, and working across AWS, Azure, and GCP environments. Passionate about architecting extensible platforms that enable teams to build reliable, repeatable workflows in augmented operating environments.

Skills

Core Skills: Python, JavaScript, TypeScript, SQL, Go, React, HTMX, Node.js, REST APIs, GraphQL, WebSockets, AWS, Azure, GCP, Kubernetes, Docker, Terraform, Ansible, CI/CD, PostgreSQL, MongoDB, Vector Databases, Feature Stores, ETL, Data Pipelines, SQL Query Optimization, AI Systems, Agentic Systems, Observability, Monitoring, Alerting, Distributed Systems, LLM Integration, Git, Agile, Microservices, Linux, Logging, Metrics, Tracing

Professional Experience

Microsoft | Seattle, WA Jan 2024 - Present

Senior Full-Stack Engineer, AI Infrastructure

Technologies: Python, React, TypeScript, Azure, Kubernetes, PostgreSQL, Vector Databases, Terraform, CI/CD

- Architected and deployed an agentic workflow orchestration system serving 200+ internal teams, integrating AI agents with traditional software engineering patterns to enable seamless human-AI collaboration across the organization.
- Designed and implemented comprehensive observability and monitoring infrastructure for continuously running workflow processing systems, including custom dashboards and alerting mechanisms that reduced mean time to resolution by 65% for production incidents.
- Built ETL data pipelines and feature stores for LLM-powered systems, optimizing vector database queries and implementing efficient data transformations that improved inference latency by 40% while maintaining 99.9% system reliability.
- Led frontend development of next-generation workflow UI using React and HTMX, creating intuitive interfaces that enable non-technical users to design and execute complex automated workflows with AI agent assistance.

Google | Mountain View, CA Jun 2021 - Dec 2023

Software Engineer, Distributed Systems

Technologies: Python, Go, GCP, Kubernetes, PostgreSQL, Terraform, Ansible, Monitoring

- Developed distributed systems infrastructure supporting 10+ microservices handling 500K+ requests per second, implementing robust monitoring and observability solutions using custom metrics and structured logging across GCP infrastructure.
- Engineered CI/CD pipelines using Terraform and Ansible that automated infrastructure provisioning and configuration management, reducing deployment time from 2 hours to 15 minutes and enabling 50+ deployments per day.
- Implemented advanced SQL query optimization techniques and database schema redesigns for PostgreSQL clusters, improving query performance by 70% and reducing infrastructure costs by 35% across production

environments.

- Collaborated with product teams to design AI-assisted debugging tools and monitoring dashboards that leveraged machine learning models to predict and prevent system failures, resulting in 45% reduction in unplanned downtime.

Amazon | Seattle, WA Mar 2019 - May 2021

Full-Stack Software Engineer

Technologies: JavaScript, React, Node.js, AWS, PostgreSQL, Docker, Kubernetes, Terraform

- Built full-stack web applications and internal tools using React and Node.js, serving 50+ internal teams with features for workflow automation, data visualization, and real-time collaboration on AWS infrastructure.
- Implemented comprehensive monitoring and alerting systems for production applications using CloudWatch and custom observability tools, enabling rapid detection and resolution of performance issues across distributed systems.
- Designed and optimized data pipelines for analytics and reporting systems, implementing ETL processes that ingested and transformed 100GB+ of daily data, enabling real-time insights for business intelligence teams.
- Established infrastructure-as-code practices using Terraform and Ansible, standardizing deployment processes across 15+ services and reducing configuration drift by 90% while improving team velocity.

Azure DevOps (Microsoft subsidiary) | Redmond, WA Aug 2017 - Feb 2019

Software Engineer, Platform Engineering

Technologies: Python, JavaScript, Azure, SQL Server, Docker, CI/CD, Monitoring

- Developed platform services and tooling for CI/CD automation, enabling 200+ engineering teams to deploy applications reliably across Azure cloud environments with comprehensive observability and monitoring capabilities.
- Implemented distributed tracing and observability solutions for complex microservices architectures, providing teams with actionable insights into system behavior and performance bottlenecks in production.
- Designed and built ETL workflows for data pipeline management, processing structured and unstructured data across multiple Azure services and enabling advanced analytics for infrastructure optimization.
- Created internal developer tools and dashboards using React and Python backends, improving developer productivity and enabling self-service infrastructure provisioning with built-in monitoring and alerting.

AWS | Seattle, WA Jan 2016 - Jul 2017

Software Engineer, Infrastructure Services

Technologies: Python, JavaScript, AWS, PostgreSQL, Terraform, Git, Agile

- Contributed to development of AWS infrastructure services, implementing features for resource management and monitoring across distributed cloud environments serving thousands of enterprise customers.
- Participated in design and implementation of observability tools and dashboards that provided customers with real-time visibility into their AWS infrastructure, improving operational efficiency and reducing troubleshooting time.
- Implemented RESTful APIs and optimized database queries for high-performance systems, ensuring sub-100ms response times for critical infrastructure management operations.
- Collaborated with cross-functional teams on infrastructure-as-code initiatives using Terraform, establishing best practices for reproducible and scalable cloud infrastructure deployments.

Certifications

- AWS Certified Solutions Architect - Professional
- Microsoft Azure Solutions Architect Expert
- Google Cloud Professional Cloud Architect
- Kubernetes Application Developer (CKAD)
- HashiCorp Certified: Terraform Associate
- AWS Certified DevOps Engineer - Professional

Education

University of Washington

Master of Science in Computer Science 2015 **State University**

Bachelor of Science in Computer Science 2013
