

Sabih Haider

Seattle, WA, USA | sabih.haider@gmail.com | +1-425-555-0147 | <https://linkedin.com/in/sabih-haider-engineer>

Professional Summary

Full-stack software engineer with 8+ years of hands-on experience designing and building distributed systems, AI-powered infrastructure, and scalable GTM platforms. Proven expertise in agentic systems, observability architecture, and infrastructure as code across AWS, Azure, and GCP. Demonstrated track record of delivering production-grade systems that combine classical software engineering with emerging AI technologies, enabling seamless human-AI collaboration at scale.

Skills

Core Skills: React, HTMX, JavaScript, TypeScript, CSS, HTML5, Responsive Design, User Experience Design, Python, Node.js, Go, SQL, REST APIs, GraphQL, Microservices Architecture, AWS, Azure, GCP, Terraform, Ansible, Infrastructure as Code, Docker, Kubernetes, CI/CD Pipelines, ETL Pipelines, Vector Databases, Feature Stores, LLM Integration, Agentic Systems, Data Pipeline Design, PostgreSQL, MongoDB, Observability Architecture, Monitoring Systems, Alerting, Logging, Distributed Tracing, Prometheus, Grafana, ELK Stack, Git, GitHub Actions, Jenkins, Container Orchestration, System Design, Production Debugging, Performance Optimization

Professional Experience

Google | Mountain View, CA Jan 2023 - Present

Senior Full-Stack Engineer, Infrastructure & AI Systems

Technologies: Python, React, HTMX, Terraform, Ansible, AWS, GCP, Kubernetes, PostgreSQL, Vector Databases, LLM APIs

- Architected and deployed an agentic workflow orchestration system serving 500+ internal teams, integrating LLM-powered agents with classical software engineering patterns to enable seamless human-AI collaboration, resulting in 40% reduction in manual process execution time.
- Designed and implemented comprehensive observability infrastructure using distributed tracing and custom monitoring dashboards to track agentic system performance, reducing mean time to resolution for workflow failures from 2 hours to 15 minutes.
- Built ETL pipelines processing 10TB+ daily data feeds into vector databases and feature stores, enabling real-time context injection for LLM agents and improving decision accuracy by 35% across revenue operations.
- Led frontend development of next-generation workflow UI using React and HTMX, creating intuitive interfaces for agent-assisted task execution with real-time feedback loops and progressive enhancement patterns.

Microsoft | Redmond, WA Jun 2020 - Dec 2022

Full-Stack Software Engineer, Cloud Platform Engineering

Technologies: TypeScript, React, Node.js, Azure, Terraform, Ansible, Docker, Kubernetes, PostgreSQL, Monitoring Systems

- Developed infrastructure-as-code automation using Terraform and Ansible, managing deployment of 200+ microservices across Azure regions with 99.99% uptime, reducing infrastructure provisioning time from 4 hours to 12 minutes.
- Implemented observability and monitoring solutions leveraging Azure Monitor and custom Prometheus exporters, establishing alerting thresholds that prevented 15+ production incidents and improved system reliability metrics by 28%.

- Built full-stack CI/CD pipeline orchestration platform using React frontend and Node.js backend, enabling 2000+ developers to manage deployments with self-service capabilities and reducing deployment failures by 45%.
- Designed and implemented distributed tracing infrastructure across microservices architecture, providing deep visibility into request flows and enabling rapid diagnosis of performance bottlenecks in complex systems.

Amazon Web Services | Seattle, WA Mar 2018 - May 2020

Software Engineer, Data Platform & Analytics

Technologies: Python, JavaScript, React, AWS, Terraform, PostgreSQL, MongoDB, ETL, Feature Stores, Monitoring

- Engineered large-scale ETL pipelines processing petabyte-scale datasets, implementing data quality checks and feature store integration to support machine learning model training, reducing data preparation time by 50%.
- Developed React-based analytics dashboard for real-time monitoring of data pipeline health and performance metrics, enabling data engineers to identify and resolve issues 3x faster through improved observability.
- Implemented Infrastructure as Code using Terraform for AWS resources, standardizing deployment patterns across 8 teams and reducing infrastructure configuration errors by 60% through automated validation.
- Collaborated with ML teams to design vector database integration for semantic search capabilities, enabling new product features and improving search relevance scores by 32%.

Stripe | San Francisco, CA Aug 2016 - Feb 2018

Full-Stack Engineer, Developer Experience

Technologies: Python, JavaScript, React, Node.js, AWS, PostgreSQL, Docker, CI/CD, Git

- Built internal developer tools and dashboards using React and Node.js, improving developer productivity by 25% through streamlined access to monitoring, logging, and deployment information.
- Implemented CI/CD pipeline improvements using GitHub Actions and custom automation, reducing build times by 35% and enabling developers to deploy code 5x faster with confidence.
- Designed and maintained PostgreSQL database schemas supporting high-transaction-volume systems, optimizing query performance and achieving sub-100ms response times for critical operations.
- Contributed to observability infrastructure by implementing structured logging and metrics collection, enabling rapid incident response and reducing mean time to detection for production issues by 40%.

Uber | San Francisco, CA Jan 2015 - Jul 2016

Software Engineer, Platform Infrastructure

Technologies: Python, Go, JavaScript, AWS, Docker, Kubernetes, PostgreSQL, Monitoring, Git

- Developed containerized microservices using Docker and Kubernetes, managing deployment of platform services serving millions of requests daily with 99.95% availability.
- Implemented monitoring and alerting systems for distributed infrastructure, establishing observability best practices that reduced incident response time by 50% across platform teams.
- Built internal tools and APIs using Python and Go, enabling cross-functional teams to access infrastructure data and manage resources efficiently through well-designed interfaces.
- Contributed to infrastructure automation initiatives, reducing manual operational overhead by 30% through scripting and process improvements.

Certifications

- AWS Certified Solutions Architect Professional
- AWS Certified DevOps Engineer Professional
- Kubernetes Application Developer Certified
- HashiCorp Certified Terraform Associate
- Google Cloud Professional Cloud Architect

- Microsoft Azure Solutions Architect Expert
- Certified Kubernetes Administrator

Education

University of Washington

Master of Science in Computer Science 2014 **University of Washington**

Bachelor of Science in Computer Science 2012
