

Sabih Haider

San Francisco, CA | sabih.haider@email.com | +1-415-555-0147 | <https://linkedin.com/in/sabih-haider>

Professional Summary

Full-stack software engineer with 8+ years of hands-on experience designing and building distributed systems, AI-powered infrastructure, and high-availability platforms. Proven expertise in developing complex workflow systems that combine classical and agentic AI approaches, with deep proficiency in cloud infrastructure (AWS, GCP, Azure), observability and monitoring solutions, and data pipeline architecture. Demonstrated track record of architecting scalable systems serving millions of transactions, implementing production-grade ETL pipelines for machine learning workloads, and leading cross-functional teams to deliver mission-critical infrastructure. Strong communicator skilled at translating technical complexity for both engineering and non-technical stakeholders.

Skills

Core Skills: React, HTMX, JavaScript, TypeScript, CSS, REST APIs, GraphQL, Web Components, Python, Node.js, Go, SQL, PostgreSQL, MongoDB, LLMs, Vector Databases, Feature Stores, AI Agents, Prompt Engineering, RAG Systems, Data Pipelines, ETL, AWS, GCP, Azure, Kubernetes, Docker, Terraform, Ansible, Infrastructure as Code, Observability, Monitoring, Prometheus, Grafana, ELK Stack, Distributed Tracing, Alerting, Logging, CI/CD Pipelines, GitHub Actions, Jenkins, GitLab CI, Deployment Automation, Version Control, Git, Distributed Databases, High-Availability Systems, Database Design, Query Optimization, Replication, Sharding, Technical Leadership, Communication, Cross-functional Collaboration, Mentoring, Documentation, Agile Methodologies

Professional Experience

Google | Mountain View, CA Jan 2023 - Present

Senior Software Engineer, Infrastructure & AI Systems

Technologies: Python, Go, React, HTMX, GCP, Kubernetes, PostgreSQL, Vector Databases, Terraform, Ansible, Prometheus, Grafana

- Architected and deployed an AI-powered workflow orchestration system serving 500+ internal teams, integrating LLMs with classical workflow engines to automate complex business processes, resulting in 40% reduction in manual task execution time and establishing a new pattern for agentic system design across the organization.
- Designed and implemented comprehensive observability and monitoring infrastructure for distributed workflow processing systems, building custom Prometheus metrics and Grafana dashboards that reduced mean time to resolution for production incidents by 65% and provided real-time visibility into AI agent performance and reliability.
- Led the design and implementation of feature stores and vector database infrastructure supporting LLM-powered recommendation systems, optimizing ETL pipelines to process 10 million+ daily events with sub-second latency, enabling personalized AI experiences for millions of users.
- Developed full-stack UI using React and HTMX for human-AI collaboration workflows, creating intuitive interfaces that seamlessly integrated AI agent suggestions with human decision-making, improving user adoption by 85% and setting new standards for agent-assisted UX design.

Microsoft | Seattle, WA Jun 2020 - Dec 2022

Software Engineer, Cloud Infrastructure & Observability

Technologies: Python, TypeScript, React, Azure, Kubernetes, MongoDB, PostgreSQL, Terraform, Ansible, ELK Stack, CI/CD

- Built and maintained distributed database monitoring and observability platform on Azure, implementing real-time alerting and anomaly detection for high-availability systems serving 100+ enterprise customers, reducing unplanned

downtime by 55% and improving customer satisfaction scores by 30 points.

- Engineered ETL data pipelines processing terabytes of telemetry data daily, designing schema and query optimization strategies for distributed databases that improved query performance by 70% and enabled advanced analytics for infrastructure health monitoring.
- Developed React-based dashboards and HTMX-powered interactive monitoring tools providing operators with actionable insights into system behavior, implementing custom visualization components that reduced time to diagnose production issues from hours to minutes.
- Established Infrastructure as Code practices using Terraform and Ansible across 50+ microservices, automating deployment pipelines and reducing infrastructure provisioning time by 80%, while mentoring 6 junior engineers on cloud architecture best practices and CI/CD automation.

Amazon Web Services | Seattle, WA Mar 2018 - May 2020

Software Engineer, Distributed Systems

Technologies: Python, Java, Node.js, AWS, PostgreSQL, DynamoDB, Kubernetes, Docker, Terraform, Jenkins, Git

- Designed and implemented distributed database replication and failover mechanisms for high-availability systems, ensuring zero data loss and automatic recovery across multiple AWS regions, supporting mission-critical workloads with 99.99% uptime SLA.
- Developed comprehensive CI/CD pipelines using Jenkins and GitHub Actions, automating testing, deployment, and rollback procedures for 30+ microservices, reducing deployment time from 2 hours to 15 minutes and enabling 50+ safe deployments per week.
- Built Python-based data pipeline infrastructure for processing and analyzing system metrics across distributed databases, implementing ETL workflows that ingested 500 million events daily and powered real-time dashboards for infrastructure teams.
- Collaborated with product teams to design and implement new database features, conducting thorough code reviews and establishing quality standards that reduced production bugs by 45% and improved system reliability across AWS infrastructure.

NVIDIA | Santa Clara, CA Sep 2016 - Feb 2018

Software Engineer, Platform Engineering

Technologies: Python, C++, JavaScript, React, AWS, GCP, Docker, PostgreSQL, Git, REST APIs

- Developed full-stack platform tools for managing GPU compute clusters across AWS and GCP, building React frontends and Python backends that provided engineers with visibility into resource utilization and job scheduling, improving cluster efficiency by 35%.
- Implemented automated testing and CI/CD pipelines for platform services, reducing manual testing overhead by 60% and enabling rapid iteration on infrastructure improvements while maintaining high code quality standards.
- Designed and built REST APIs for cluster management and monitoring, supporting 200+ concurrent users and processing 1 million+ API requests daily with sub-100ms latency, establishing patterns for scalable API design used across the organization.
- Collaborated with distributed systems team to optimize database queries and schema design for high-throughput workloads, improving query performance by 50% and enabling real-time monitoring of GPU utilization across thousands of nodes.

Uber | San Francisco, CA Jun 2015 - Aug 2016

Software Engineer, Backend Systems

Technologies: Python, Node.js, PostgreSQL, MongoDB, Docker, AWS, Git, Microservices

- Built microservices for real-time data processing and analytics, handling millions of ride requests daily with sub-second latency requirements, implementing efficient database queries and caching strategies that reduced infrastructure costs by 25%.

- Developed backend APIs supporting mobile and web clients, ensuring backward compatibility and graceful degradation while rolling out new features to 50+ million users across multiple regions.
- Participated in on-call rotation for production systems, diagnosing and resolving complex issues in distributed systems, implementing monitoring and alerting improvements that reduced incident response time by 40%.
- Contributed to architectural discussions on microservices design patterns and database scaling strategies, helping establish best practices that improved system reliability and developer productivity across the platform team.

Certifications

- AWS Certified Solutions Architect - Professional
- Google Cloud Professional Cloud Architect
- Microsoft Azure Solutions Architect Expert
- Kubernetes Application Developer (CKAD)
- HashiCorp Certified: Terraform Associate
- Certified Kubernetes Administrator (CKA)
- AWS Certified DevOps Engineer - Professional

Education

University of California, Berkeley

Master of Science in Computer Science 2015 **University of California, Berkeley**

Bachelor of Science in Computer Science 2013
