

Sabih Haider

San Francisco, CA | sabih.haider@gmail.com | +1-415-892-3847 | <https://linkedin.com/in/sabih-haider-engineer>

Professional Summary

Full-stack software engineer with 8+ years of hands-on experience building distributed systems, AI-powered infrastructure, and complex cloud-native applications. Proven expertise in designing and implementing observability systems, data pipelines for machine learning, and agentic workflow platforms. Skilled in React, Python, and infrastructure as code with deep knowledge of AWS, GCP, and Azure. Demonstrated ability to architect scalable systems that seamlessly integrate AI agents with traditional software engineering practices. Strong communicator with a track record of translating complex technical requirements into intuitive user experiences and enabling cross-functional teams through clear documentation and technical guidance.

Skills

Core Skills: React, HTMX, JavaScript, TypeScript, CSS, Web Components, UI/UX Design, Responsive Design, Python, Node.js, Go, REST APIs, GraphQL, Microservices, Distributed Systems, Message Queues, AWS, GCP, Azure, Kubernetes, Docker, Terraform, Ansible, Infrastructure as Code, CI/CD, Jenkins, GitHub Actions, GitLab CI, AI, LLMs, Vector Databases, Feature Stores, ETL, Data Pipelines, SQL, PostgreSQL, MongoDB, Data Engineering, Observability, Monitoring, Logging, Metrics, Alerting, Prometheus, Grafana, ELK Stack, Datadog, New Relic, Agile, Git, Code Review, Technical Documentation, Communication, System Design, Performance Optimization, Production Debugging

Professional Experience

Google | Mountain View, CA Jan 2023 - Present

Senior Software Engineer, Infrastructure & AI Systems

Technologies: Python, Go, React, HTMX, GCP, Kubernetes, Terraform, Ansible, PostgreSQL, Vector Databases, LLMs, Prometheus, Grafana

- Architected and deployed an observability platform for distributed workflow systems, implementing comprehensive monitoring and alerting that reduced incident response time by 65% across 200+ microservices. Designed intuitive dashboards using Grafana that enabled non-technical stakeholders to understand system health and performance metrics.
- Led the design and implementation of an AI-augmented workflow orchestration system that seamlessly integrated LLM agents with traditional backend services. Built feature stores and vector database infrastructure supporting real-time feature computation for agentic decision-making, enabling 40% improvement in workflow automation accuracy.
- Developed end-to-end data pipeline infrastructure for machine learning systems using Python and ETL frameworks, processing 500GB+ daily data volumes. Implemented CI/CD automation with GitHub Actions and Terraform for infrastructure provisioning, reducing deployment time from 2 hours to 15 minutes.
- Mentored 6 junior engineers on distributed systems design, infrastructure as code best practices, and AI system architecture. Established technical documentation standards and conducted 50+ code reviews, improving overall system reliability and maintainability across the team.

Microsoft | Seattle, WA Jun 2020 - Dec 2022

Software Engineer, Cloud Platform & Observability

Technologies: Python, JavaScript, React, Azure, Kubernetes, Terraform, Ansible, PostgreSQL, MongoDB, Datadog, ELK Stack, CI/CD, Jenkins

- Designed and built a comprehensive monitoring and observability solution for Azure-based distributed systems serving 500+ internal teams. Implemented custom metrics collection, centralized logging, and intelligent alerting that reduced mean time to resolution by 55% for production incidents.
- Developed React-based dashboards and HTMX-enhanced interfaces for real-time system monitoring, enabling operators to diagnose complex infrastructure issues in seconds. Created reusable UI components that became the standard pattern for observability tools across the organization.
- Implemented infrastructure as code using Terraform and Ansible to manage 2000+ cloud resources across multiple Azure regions. Automated CI/CD pipelines with Jenkins, reducing manual deployment errors by 90% and enabling 50+ deployments per day with zero downtime.
- Collaborated with data engineering teams to design ETL pipelines for operational metrics and logs, building feature stores that powered predictive alerting systems. Reduced false positive alerts by 70% through machine learning-driven anomaly detection.

AWS | San Francisco, CA Mar 2018 - May 2020

Software Engineer, Developer Tools & AI Infrastructure

Technologies: Python, JavaScript, React, Node.js, AWS, Kubernetes, Docker, Terraform, PostgreSQL, MongoDB, LLMs, Vector Databases, CI/CD

- Built a full-stack developer platform combining React frontend with Python backend services, enabling 10,000+ developers to manage cloud infrastructure. Integrated AI-powered code suggestions using LLMs and vector databases, improving developer productivity by 35%.
- Designed and implemented distributed data pipelines for processing terabytes of infrastructure telemetry. Created ETL workflows that fed feature stores supporting machine learning models for cost optimization and performance prediction, generating 50M+ in annual savings.
- Architected microservices infrastructure on AWS using Kubernetes, implementing service mesh patterns and distributed tracing. Established monitoring and observability standards using Prometheus and custom dashboards, enabling rapid diagnosis of issues across 200+ services.
- Led cross-functional initiatives to integrate AI agents into developer workflows, designing intuitive interfaces that balanced automation with human control. Communicated technical architecture to both engineering teams and executive stakeholders through detailed documentation and presentations.

Stripe | San Francisco, CA Sep 2016 - Feb 2018

Full-Stack Software Engineer

Technologies: JavaScript, React, Node.js, Python, AWS, PostgreSQL, Docker, CI/CD, Git, REST APIs

- Developed customer-facing React applications and internal tools serving millions of payment transactions daily. Optimized database queries and API response times, reducing p99 latency by 40% and improving user experience across the platform.
- Implemented CI/CD pipelines using Jenkins and GitHub, enabling 100+ safe deployments per day. Established code review practices and testing standards that reduced production bugs by 60%.
- Built RESTful APIs and microservices in Node.js and Python supporting payment processing, reporting, and analytics. Designed schemas and query patterns for PostgreSQL databases handling billions of records with sub-second response times.
- Collaborated with product and design teams to translate requirements into technical specifications and user-friendly interfaces. Communicated complex technical decisions to non-technical stakeholders through clear documentation and demos.

Certifications

-
- AWS Certified Solutions Architect - Professional
 - Google Cloud Professional Cloud Architect
 - Microsoft Azure Solutions Architect Expert

- Certified Kubernetes Application Developer (CKAD)
- HashiCorp Certified: Terraform Associate
- AWS Certified DevOps Engineer - Professional

Education

University of California, Berkeley

Master of Science in Computer Science 2016 **University of California, Berkeley**

Bachelor of Science in Computer Science 2014
