

Sabih Haider

Seattle, WA, USA | sabih.haider@gmail.com | +1-425-555-0147 | <https://linkedin.com/in/sabih-haider-engineer>

Professional Summary

Full-stack software engineer with 8+ years of hands-on experience designing and building distributed systems, AI-powered infrastructure, and complex workflow platforms. Proven expertise in developing agentic systems, implementing observability solutions, and architecting data pipelines for machine learning workloads. Skilled in React, HTMX, and modern backend technologies with deep proficiency in AWS, GCP, and Azure cloud platforms. Strong track record of delivering scalable, production-grade systems that integrate AI agents with traditional software engineering practices. Passionate about building extensible platforms that enable teams to operate at scale with seamless human-AI collaboration.

Skills

Core Skills: React, HTMX, TypeScript, JavaScript, CSS, Web Components, Responsive Design, User Experience Design, Python, Node.js, Go, REST APIs, GraphQL, Microservices, Event-Driven Architecture, Agentic Systems, LLM Integration, Vector Databases, Feature Stores, Prompt Engineering, AI Observability, Workflow Orchestration, SQL, PostgreSQL, MongoDB, Distributed Databases, ETL Pipelines, Data Pipeline Design, Schema Optimization, Query Performance, AWS, GCP, Azure, Kubernetes, Docker, Terraform, Ansible, Infrastructure as Code, CI/CD Pipelines, Prometheus, Grafana, ELK Stack, Distributed Tracing, Alerting, Logging, Metrics Collection, System Monitoring, Jenkins, GitHub Actions, GitLab CI, Git, Linux, Agile, Code Review, Testing Frameworks

Professional Experience

Google | Mountain View, CA Jun 2023 - Present

Senior Software Engineer, AI Infrastructure

Technologies: Python, Go, React, HTMX, GCP, Kubernetes, PostgreSQL, Terraform, Ansible, Prometheus, Vector Databases

- Architected and deployed an agentic workflow system that orchestrates AI agents with human operators, reducing manual intervention by 65% across internal teams while maintaining observability through comprehensive monitoring dashboards built with Prometheus and Grafana.
- Designed and implemented a feature store infrastructure supporting 200+ ML models in production, enabling rapid experimentation with LLM-based agents and reducing feature engineering time by 40% through automated ETL pipelines.
- Led the development of a React and HTMX-based UI for mixed human-AI workflow execution, enabling seamless collaboration between users and autonomous agents with real-time observability into agent decision-making processes.
- Established observability standards for distributed agentic systems, implementing distributed tracing and custom metrics that improved incident detection time from hours to minutes across production environments.

Microsoft | Redmond, WA Mar 2021 - May 2023

Software Engineer, Cloud Platform Services

Technologies: Python, TypeScript, Node.js, React, Azure, Kubernetes, PostgreSQL, Terraform, Jenkins, ELK Stack

- Developed and maintained microservices for Azure data pipeline orchestration, processing 10+ billion events daily while ensuring sub-second latency through optimized SQL queries and distributed system design.

- Implemented comprehensive observability infrastructure using ELK Stack and custom monitoring solutions, enabling rapid diagnosis of issues in complex distributed systems and reducing mean time to resolution by 50%.
- Built React-based dashboards for monitoring and managing ETL workflows, integrating with Azure services and providing real-time visibility into data pipeline health and performance metrics.
- Collaborated with data science teams to design and implement vector database integrations for semantic search capabilities, supporting AI-powered features across multiple Azure services.

Amazon Web Services | Seattle, WA Jan 2019 - Feb 2021

Software Engineer, Developer Tools

Technologies: Python, JavaScript, React, AWS, Docker, Kubernetes, PostgreSQL, Terraform, Ansible, GitHub Actions

- Engineered CI/CD pipeline infrastructure supporting 500+ internal teams, implementing Terraform and Ansible for infrastructure as code, reducing deployment time from 45 minutes to 8 minutes through automated provisioning.
- Designed and built a React-based developer dashboard providing observability into CI/CD workflows, build metrics, and deployment status, improving developer productivity and reducing context-switching overhead.
- Implemented automated monitoring and alerting systems for production infrastructure using CloudWatch and custom metrics, enabling proactive detection of anomalies in distributed systems before customer impact.
- Developed ETL pipelines for aggregating build and deployment metrics, creating data-driven insights that informed infrastructure optimization decisions and reduced operational costs by 30%.

NVIDIA | Santa Clara, CA Aug 2017 - Dec 2018

Software Engineer, Platform Engineering

Technologies: Python, C++, Node.js, React, AWS, GCP, Docker, PostgreSQL, Jenkins, Prometheus

- Built distributed systems for managing GPU compute resources across multiple cloud providers including AWS and GCP, implementing monitoring and observability solutions that tracked resource utilization and performance metrics.
- Developed React interfaces for visualizing complex distributed system state and resource allocation, enabling engineers to make informed decisions about infrastructure optimization.
- Implemented SQL-based analytics pipelines for processing telemetry data from thousands of compute nodes, providing insights into system performance and identifying optimization opportunities.
- Contributed to CI/CD infrastructure improvements using Jenkins and Docker, standardizing deployment processes across teams and improving release reliability.

AMD | Austin, TX Jun 2016 - Jul 2017

Software Engineer, Infrastructure

Technologies: Python, JavaScript, Node.js, AWS, Docker, PostgreSQL, Git, Jenkins

- Developed backend services and APIs supporting internal infrastructure management tools, handling complex distributed system requirements and ensuring high availability.
- Implemented monitoring solutions for tracking system health and performance metrics, enabling rapid identification and resolution of infrastructure issues.
- Contributed to CI/CD pipeline development using Jenkins and Docker, improving deployment consistency and reducing manual operational overhead.
- Designed and optimized SQL queries for large-scale data analysis, supporting decision-making processes for infrastructure capacity planning.

Certifications

-
- AWS Certified Solutions Architect - Professional
 - Google Cloud Professional Cloud Architect
 - Microsoft Azure Solutions Architect Expert

- Kubernetes Application Developer (CKAD)
- Certified Kubernetes Administrator (CKA)
- HashiCorp Certified: Terraform Associate
- AWS Certified DevOps Engineer - Professional

Education

University of Washington

Master of Science in Computer Science 2016 **University of Washington**

Bachelor of Science in Computer Science 2014
