

**Dear Hiring Manager at datadog,**

I am a Senior Machine Learning Engineer with six years of progressive experience building and deploying AI systems at industry leaders including Google, NVIDIA, and AMD, and I am excited to bring my technical expertise and customer-focused mindset to Datadog's Enterprise Sales Engineering team. Throughout my career, I have developed deep proficiency in Python, C++, and modern ML frameworks while architecting scalable systems that drive measurable business impact—including a 15% improvement in GPU processing efficiency at AMD and a 25% acceleration in data processing speeds at NVIDIA. My background spans the full technical stack: I have designed automated monitoring systems that reduced critical errors by 20%, built interactive web interfaces using Flask and JavaScript to translate complex ML capabilities into user-accessible solutions, and collaborated extensively with cross-functional teams to identify and execute on strategic technical opportunities. This combination of hands-on engineering expertise, proven ability to communicate technical value to stakeholders, and passion for solving observability and performance challenges positions me to excel at qualifying and closing complex enterprise opportunities while providing credible technical guidance during customer evaluations. I am eager to partner with Datadog's sales team to articulate how observability drives business outcomes, and I welcome the opportunity to discuss how my technical depth and customer engagement experience can contribute to your enterprise growth.

Sincerely,

**Harmain Ali**
