Hiring Manager

Stripe US

Re: Application for Software Engineer (Python/React)

Hiring Manager,

I am writing to express my enthusiastic interest in the Software Engineer position at Stripe US. With a robust background in full-stack development, particularly with React, Next.js, and comprehensive backend system design, I am confident my skills and achievements align strongly with your requirements for building scalable and efficient software solutions.

In my role as Junior Web Developer at MST Developers, I have led critical aspects of the Finmile platform, including designing and implementing backend schemas, REST APIs, and data workflows. My experience extends to optimizing relational databases, notably improving MySQL query load times by up to 6x and reducing order errors by 30%. I also automated inventory workflows via custom API integrations, recovering 3-4 hours of manual work daily and eliminating sync errors.

I am adept at building and maintaining robust CI/CD pipelines using GitHub Actions, which significantly cut deployment release cycles from two days to under six hours across staging and production environments. My contributions have also reduced production bugs by approximately 50% through architectural improvements and systematic debugging, alongside boosting application performance by over 80% via caching strategies and asset optimization. I am proficient in managing production deployments, database migrations, and live debugging across diverse hosting environments.

My proven ability to deliver high-impact solutions, coupled with my expertise in modern web technologies and development practices, makes me an ideal candidate for this role. I am eager to bring my dedication to excellence and problem-solving to Stripe and contribute to your innovative team. Thank you for your time and consideration.
